## **Parallel Programming: for Multicore and Cluster Systems** Thomas Rauber, Gudula Rünger

Innovations in hardware architecture, like hyper-threading or multicore processors, mean that parallel computing resources are available for inexpensive desktop computers. In only a few years, many standard software products will be based on concepts of parallel programming implemented on such hardware, and the range of applications will be much broader than that of scientific computing, up to now the main application area for parallel computing.

Rauber and Rünger take up these recent developments in processor architecture by giving detailed descriptions of parallel programming techniques that are necessary for developing efficient programs for multicore processors as well as for parallel cluster systems and supercomputers. Their book is structured in three main parts, covering all areas of parallel computing: the architecture of parallel systems, parallel programming models and environments, and the implementation of efficient application algorithms. The emphasis lies on parallel programming techniques needed for different architectures. For this second edition, all chapters have been carefully revised. The chapter on architecture of parallel systems has been updated considerably, with a greater emphasis on the architecture of multicore systems and adding new material on the latest developments in computer architecture. Lastly, a completely new chapter on general-purpose GPUs and the corresponding programming techniques has been added.

The main goal of the book is to present parallel programming techniques that can be used in many situations for a broad range of application areas and which enable the reader to develop correct and efficient parallel programs. Many examples and exercises are provided to show how to apply the techniques. The book can be used as both a textbook for students and a reference book for professionals. The material presented has been used for courses in parallel programming at different universities for many years.

### **From reader reviews:**

#### **Alicia Wescott:**

The book Parallel Programming: for Multicore and Cluster Systems give you a sense of feeling enjoy for your spare time. You can utilize to make your capable considerably more increase. Book can for being your best friend when you getting anxiety or having big problem with your subject. If you can make examining a book Parallel Programming: for Multicore and Cluster Systems to become your habit, you can get far more advantages, like add your own personal capable, increase your knowledge about several or all subjects. You are able to know everything if you like available and read a book Parallel Programming: for Multicore and Cluster Systems. Kinds of book are several. It means that, science publication or encyclopedia or other individuals. So , how do you think about this book?

#### **Carol Witt:**

Book is to be different per grade. Book for children until eventually adult are different content. As we know that book is very important for people. The book Parallel Programming: for Multicore and Cluster Systems had been making you to know about other knowledge and of course you can take more information. It is extremely advantages for you. The guide Parallel Programming: for Multicore and Cluster Systems is not only giving you much more new information but also to become your friend when you truly feel bored. You can spend your spend time to read your book. Try to make relationship while using book Parallel Programming: for Multicore and Cluster Systems. You never really feel lose out for everything in the event you read some books.

#### **Fredrick Alfred:**

As people who live in the modest era should be change about what going on or details even knowledge to make these keep up with the era that is always change and make progress. Some of you maybe will probably update themselves by examining books. It is a good choice for you personally but the problems coming to you is you don't know what one you should start with. This Parallel Programming: for Multicore and Cluster Systems is our recommendation to help you keep up with the world. Why, since this book serves what you want and wish in this era.

#### **Julie Slocum:**

In this age globalization it is important to someone to get information. The information will make professionals understand the condition of the world. The fitness of the world makes the information simpler to share. You can find a lot of personal references to get information example: internet, newspaper, book, and soon. You will see that now, a lot of publisher which print many kinds of book. The book that recommended for your requirements is Parallel Programming: for Multicore and Cluster Systems this book consist a lot of the information on the condition of this world now. This book was represented how can the world has grown up. The vocabulary styles that writer value to explain it is easy to understand. The actual

writer made some research when he makes this book. That's why this book suitable all of you.
